Policies

Students will be held responsible for understanding and adhering to all policies. Policies are subject to change; please read them at the beginning of each class as it may have changed since your last class. Policies may be slightly different depending on the modality in which you attend class. If you have recently changed modalities it is important you read the policies governing your current class modality.

Late Assignments

Late assignments receive a maximum score of 70% if assignments are not handed on the date of completion or with later with a valid excuse. Previous assignments will need to be completed first before starting the following course load. Technological issues are not considered valid grounds for late assignment submission.

Learning Teams

Students are expected to work effectively in diverse groups and groups to achieve tasks. Students must collaborate and function well in team settings as both leaders as well as followers. Respect for human diversity and tolerant behavior towards colleagues, peers, and instructors is expected. If difficulties are experienced working with a team, the team is expected to resolve them within it if possible. However, feel free to contact your instructor for guidance if there are concerns in this area.

It is expected an active participation and contribution to the team assignments by a) providing original work that is accepted and used by the team with proof of originality b) participating in the project from assignment organizing through meaningful final review of the team project for submission, and c) ensuring to your team that your contributions are your original work and properly quoted, cited, and referenced.

Technical Support

Technical Support is available from Mon- Fri from 9am to 6pm. Call 201-761-0144 or email any instructor from your class. Email addresses will be provided in class.

Feedback

At the end of each course that is completed, an evaluation sheet will be provided to a general questionnaire to provide feedback to help and improve future courses.

Vocational Course Objectives of the Internetwork Engineering Program

This program provides comprehensive training, including theoretical concepts and hands-on practice, to provide students with the expertise and skills to work as a Network Administrator/Engineer or Computer/Network Support Specialist. The graduate will have working familiarity with network hardware and software including Microsoft Windows Desktop and Server operating systems, and will be able to design, install, troubleshoot and support Microsoft and Cisco networks and implement Network Security.

The program is designed to prepare students to become CompTIA certified A+, CompTIA certified Network+, CompTIA certified Security+, CompTIA certified Linux+, CompTIA Cybersecurity Analyst (CySA), Microsoft Certified Solutions Associate (MCSA) on Microsoft Windows 2016 Server, Cisco Certified Entry Network Technician (CCENT), and Cisco Certified Network Associates (CCNA). Students will also learn how to create an effective resume, methods for job search, and how to get ready for a job interview.

Grading Formula

Percentage %	Grade	GPA
90+	A	4.0
87-89	A-	3.7
84-86	B+	3.3
80-83	B	3.0
77-79	B-	2.7
74-76	C+	2.3
70-73	C	2.0
65-69	D+	1.5
60-64	D	1.0
<59	F	0.0

Point Values for Course Assignments

Regular Course

Assignments	Percentage
Exams	60%
Homework/Online Assignment	40%
Total	100%

T-Course

Courses

IE100: Introduction to Computers and Internet Fundamentals
IE100T: Certification Test Preparation
IE110: Computer Hardware Installation and Troubleshooting
IE110T: Certification Test Preparation
IE115: Networking Fundamentals
IE115T: Certification Test Preparation
IE121: Supporting Microsoft Windows Desktop Operating System
IE121T: Certification Test Preparation
IE122: Supporting Microsoft Windows Server Operating System
IE122T: Certification Test Preparation
IE140: Planning, Implementing and Administering Microsoft Windows Directory Service
IE140T: Certification Test Preparation
IE160: Planning and Maintaining a Microsoft Windows Network Infrastructure
IE160T: Certification Test Preparation
IE170: Technical Career Preparation Workshop
IE180: Implementing and Managing Security in a Microsoft Windows Network
IE180T: Certification Test Preparation
IE190: Introduction to Cisco Router Configuration
IE190T: Certification Test Preparation
IE195: Advanced Cisco Router Configuration
IE195T: Certification Test Preparation
IE200: Designing, Implementing & Troubleshooting Project
IE230: Implementing Advanced Network Security
IE230T: Certification Test Preparation
IE210: Certification Test Preparation
UN100: Linux System Administration I
UN100T: Certification Test Preparation

Course Title: IE100 - Introduction to Computers and Internet Fundamentals

Prerequisites(s): None

Credits: 3.0

Course Description: Gives students an overview of physical personal computer hardware and peripherals, Printers, Operating systems, Internet technologies, Network Security and Professional Ethics.

Course Objective: This course, together with IE110, prepares students for CompTIA A+ Exams 220-1001 and 220-1002.

Learning outcomes: Upon successful completion of this course, the student will be able to:

- Install, configure, and upgrade Microsoft Operating Systems while using Microsoft Operating Systems backup and recovery options.
- Performing basic wired and wireless networking, with the use of Internet protocols that are performed everyday computing.
- Understanding and demonstrating functions of Microsoft Operating System fundamentals for successful execution of operations.
- Understand fundamental principles of implementing LANs and internet access, and configuring Internet web browsers
- Demonstrate troubleshooting models and diagnostic of Microsoft Operating Systems

Instructional Methods: Class Lecture, Lab and In-Class Discussions include a breakdown of each chapter in the following session that is being attended. Hands-on with physical computer parts to analyze what has been learned and apply it to real machines. Class participations is a must to develop knowledge from other students and instructors to help in on the job situations or interviews. Major topics covered in the course are: Windows Vista/7/8/10, OS Troubleshooting, Local Area Networking, Internet, Security and IT Professionalism.

Required Course Materials

- Meyers, M. 2019. CompTIA A+ Certification All-in-One Exam Guide, 10th Edition. McGraw-Hill.

Additional Course Material

- Docter, Q., Dulaney, E., Skandier, T. (2019). CompTIA A+ Complete Study Guide: Exams 220-1001 (Essentials) and 220-1002 (Practical Application). Sybex

Approximate Amount of Time

Task Requirement	Amount of time (Hours)
Lecture, In-Class Lab and Discussion	46
Project	4
Total	50

Course Outline

Week	Session	Homework Reading Assignment	Amount of homework time (Hours)
Week 1	Session 1	Chapter 4 – Visible Windows Chapter 5 – Visible Networks	2.5 hours
	Session 2	Chapter 12 – Implementing Hard Drives Chapter 14 – Installing and Updating Windows	2.5 hours
Week 2	Session 1	Chapter 15 – Windows Under the Hood Chapter 16 – NTFS, Users, and Groups	2.5 hours
	Session 2	Chapter 17 – Maintaining and Optimizing Windows Chapter 18 – Working with the Command-Line Interface Mid-Term Test	2.5 hours

Week 3	Session 1	Chapter 19 – Troubleshooting Windows Chapter 22 – Local Area Networking	2.5 hours
	Session 2	Chapter 23 – Wireless Networking Chapter 24 – The Internet	2.5 hours
Week 4	Session 1	Chapter 29 – Securing Computers Chapter 30 – Virtualization	2.5 hours
	Session 2	Chapter 31 – The Right PC for You Chapter 32 – The Complete PC Tech Final Test Final Project	2.5 hours

Course Title: IE100T – Certification Test Preparation

Prerequisites(s): None

Credits: 3.0

Course Description: This course reinforces the student learning process by reviewing learned topics with the aid of online simulation tools and computer-based training. It provides additional simulated hands-on experience as the student prepares for the related certification and technical job interview.

Learning outcomes: Upon successful completion of this course, the student will be able to:

- Install, configure, and upgrade Microsoft Operating Systems while using Microsoft Operating Systems backup and recovery options.
- Performing basic wired and wireless networking, with the use of Internet protocols that are performed on a daily basis for everyday computing.
- Understanding and demonstrating functions of Microsoft Operating System fundamentals for successful execution of operations.
- Understand fundamental principles of implementing LANs and internet access, and configuring Internet web browsers
- Demonstrating system troubleshooting models and diagnostic of Microsoft Operating Systems

Instructional Methods: Class Lecture, Lab and In-Class Discussions include a breakdown of each chapter in the following session that is being attended. Hands-on with physical computer parts to analyze what has been learned and apply it to real machines. Class participations is a must to develop knowledge from other students and instructors to help in on the job situations or interviews. Major topics covered in the course are: Windows Vista, Windows 7, Windows 8, Windows 10, OS Troubleshooting, Local Area Networking, Internet, Security and IT Professionalism.

Required Course Materials

- Meyers, M. 2019. CompTIA A+ Certification All-in-One Exam Guide, 10th Edition. McGraw-Hill.

Additional Course Material

- Docter, Q., Dulaney, E., Skandier, T. (2019). CompTIA A+ Complete Study Guide: Exams 220-1001 (Essentials) and 220-1002 (Practical Application). Sybex

Course Title: IE110 -Computer Hardware Installation and Troubleshooting

Prerequisites(s): None

Credits: 3.0

Course Description: Gives student essential operating competencies for an entry-level IT professional or PC service technician on computer hardware and peripherals. It provides more hands-on with personal computer hardware in a detail manner.

Course Objective: This course, together with IE100, prepares students for CompTIA A+ Exams 220-1001 and 220-1002.

Learning outcomes: Upon successful completion of this course, the student will be able to:

- Install, configure, and upgrade computers with hands-on training.
- Install and configure motherboards, processors, memory, hard drives, power supply video cards, printers and laptops
- Troubleshoot system start up, hardware and software errors.
- Configure BIOS and CMOS settings and implementing raid arrays for enhanced security
- Connect to a small wireless network using a single router or access point, while implementing wireless security

Instructional Methods: Class Lecture, Lab and In-Class Discussions include a breakdown of each chapter in the following session that is being attended. Hands-on with physical computer parts to analyze what has been learned and apply it to real machines. Class participation is a must to develop knowledge from other students and instructors to help in on the job situations or interviews. Major topics covered in the course: Mice, Keyboard, USB/Firewire Devices, Ports, Motherboards, Monitors, Processors, Memory, Hard Drives, CD/DVD-ROM Drives, Modems, Network Cards, Laptops and Printers.

Required Course Materials

- Meyers, M. 2019. CompTIA A+ Certification All-in-One Exam Guide, '0th Edition. McGraw-Hill.

Additional Course Material

- Docter, Q., Dulaney, E., Skandier, T. (20'9). CompTIA A+ Complete Study Guide: Exams 220-1001 (Essentials) and 220-1002 (Practical Application). Sybex

Course Outline

Week	Session	Homework Reading Assignment	Amount of homework time (Hours)
Week 1	Session 1	Chapter 2 – Operational Procedures Chapter 3 – The Visible PC	2.5 hours
	Session 2	Chapter 6 – Microprocessors Chapter 7 – RAM	2.5 hours
Week 2	Session 1	Chapter 8 – BIOS Chapter 9 – Motherboards	2.5 hours
	Session 2	Chapter 10 – Power Supplies Mid-Term Test	2.5 hours

Week 3	Session 1	Chapter 11 – Hard Drive Technologies Chapter 13 – Removable Media Chapter 20 – Input Devices	2.5 hours
	Session 2	Chapter 21 – Video Chapter 25 – Multimedia	2.5 hours
Week 4	Session 1	Chapter 26 – Portable Computing Chapter 27 – Mobile Devices	2.5 hours
	Session 2	Chapter 28 – Printers Final Test Final Project	2.5 hours

Course Title: IE110T – Certification Test Preparation

Prerequisites(s): None

Credits: 1.0

Objective: This course reinforces the student learning process by reviewing learned topics with the aid of online simulation tools and computer-based training. It provides additional simulated hands-on experience as the student prepares for the related certification and technical job interview.

Learning outcomes: Upon successful completion of this course, the student will be able to:

- Install, configure, and upgrade computers with hands-on training.
- Install and configure motherboards, processors, memory, hard drives, power supply video cards, printers and laptops
- Troubleshoot system start up, hardware and software errors.
- Configure BIOS and CMOS settings and implementing raid arrays for enhanced security
- Connect to a small wireless network using a single router or access point, while implementing wireless security

Instructional Methods: Class Lecture, Lab and In-Class Discussions include a breakdown of each chapter in the following session that is being attended. Hands-on with physical computer parts to analyze what has been learned and apply it to real machines. Class participation is a must to develop knowledge from other students and instructors to help in on the job situations or interviews. Major topics covered in the course: Mice, Keyboard, USB/Firewire Devices, Ports, Motherboards, Monitors, Processors, Memory, Hard Drives, CD/DVD-ROM Drives, Modems, Network Cards, Laptops and Printers.

Required Course Materials

- Meyers, M. 2019. CompTIA A+ Certification All-in-One Exam Guide, 10th Edition. McGraw-Hill.

Additional Course Material

Course Title: IE115- Networking Fundamentals

Prerequisites(s): None

Credits: 3.0

Course Description: A typical candidate would have CompTIA's A+ certification or equivalent knowledge and would be able to install, configure and troubleshoot basic networking hardware, protocols and services.

Course Objective: This course prepares students for CompTIA Network Exam N10-007.

Learning outcomes: Upon successful completion of this course, the student will be able to:

- Understand Media and Topologies
- Understand Protocols and Standards
- Understand the Terminology of Network Implementation
- Understand Network Support

Instructional Methods: Class Lecture, Lab and In-Class Discussions include a breakdown of each chapter in the following session that is being attended. Lecture, Lab and In-Class Discussions on specific topics like dividing an IP address across multiple networks, working with network devices, protocols and security. Troubleshooting using different models and approaches.

Required Course Materials

- Meyers, M. (2019). All-in-One Network+ Study Guide, 7th Edition. McGraw-Hill.

Additional Course Material

- Lammle, T. (2019). CompTIA Network+ Study Guide: Exam N10-007. 3rd Edition. Sybex.

Approximate Amount of Time

Task Requirement	Amount of time (Hours)
Lecture, In-Class Lab and Discussion	46
Project	4
Total	50

Course Outline

Week	Session	Homework Reading Assignment	Amount of homework time (Hours)
Week 1	Session 1	Chapter 2: Network Models Chapter 3: Cabling and Topology Chapter 4: Ethernet Basics	2.5 hours
	Session 2	Chapter 5 Modern Ethernet Chapter 6: Installing a Physical Network	2.5 hours
Week 2	Session 1	Chapter 7: TCP/IP Basics Chapter 8: Routing Chapter 9: TCP/IP Applications	2.5 hours
	Session 2	Chapter 10: Network Naming Chapter 11: Securing TCP/IP Mid-Term	2.5 hours

Week 3	Session 1	Chapter 12: Advanced Networking Devices Chapter 13: IPv6 Chapter 14: Remote Connectivity	2.5 hours
	Session 2	Chapter 15: Wireless Networking Chapter 16 Virtualization and Cloud Computing	2.5 hours
Week 4	Session 1	Chapter 17: Building a Real-World Network Chapter 18: Managing Risk Chapter 19: Protecting Your Network	2.5 hours
	Session 2	Chapter 20: Network Monitoring Chapter 21: Network Troubleshooting Final Test Final Project	2.5 hours

Course Title: IE115T – Certification Test Preparation

Prerequisites(s): None

Credits: 3.0

Course Description: This course reinforces the student learning process by reviewing learned topics with the aid of online simulation tools and computer-based training. It provides additional simulated hands-on experience as the student prepares for the related certification and technical job interview.

Learning outcomes: Upon successful completion of this course, the student will be able to:

- Understand Media and Topologies
- Understand Protocols and Standards
- Understand the Terminology of Network Implementation
- Understand Network Support

Instructional Methods: Class Lecture, Lab and In-Class Discussions include a breakdown of each chapter in the following session that is being attended. Lecture, Lab and In-Class Discussions on specific topics like dividing an IP address across multiple networks, configuring and enabling router interfaces, working with the Spanning Tree Protocol, and beginner routers, switches, VTP, and STP.

Required Course Materials

- Meyers, M. (2019). All-in-One Network+ Study Guide, 7th Edition. McGraw-Hill.

Additional Course Material

- Lammle, T. (2019). CompTIA Network+ Study Guide: Exam N10-007. 3rd Edition. Sybex.

Course Title: IE121- Supporting Microsoft Windows Desktop Operating System

Prerequisites(s): None

Credits: 3.0

Course Description: This course will enable the student to install, and configure Windows 10, including ensuring hardware and software compatibility. Share and secure folders, files, and printers in a Windows environment. Configure Internet Explorer security settings.

Course Objective: This course prepares students for Microsoft MD-100 Exam.

Learning outcomes: Upon successful completion of this course, the student will be able to:

- Install, upgrade, and migrate to Windows 10, and creating a virtual hard disk for Windows deployment
- Configure hardware, applications, and access to resources.
- Configure mobile computing. Using Remote desktop and Managing VPN connections
- Monitor and maintain system that run Windows 10 and Manage quotas.
- Protect the system and data using backups and System restore.

Instructional Methods: Class Lecture, Lab and In-Class Discussions include a breakdown of each chapter in the following session that is being attended. In depth Lecture, Lab and In-Class Discussions on Installation, configuration and troubleshooting Windows 10, Driver Signing, Policies, WDS/WSIM Automated Installation, PowerShell. Backups and System Restore. Using Remote Desktop. Configure IPv4 and IPv6 settings.

Required Course Materials

- Panek, W. (2016). MCTS Windows 10 Configuration Study Guide: Exam MD-100. Sybex

Additional Course Material

- Microsoft Official Academic Course. MD-100 Installing and Configuring Windows 10 with Lab Manual Set (Microsoft Official Academic Course Series). Microsoft
- Bettany, Andrew. Exam Ref MD-100 Installing and Configuring Windows 10.

- Bettany, Andrew. Exam Ref MD-100 Installing and Configuring Windows 10.

Course Title: IE122 - Supporting Microsoft Windows Server Operating System

Prerequisites(s): IE121

Credits: 3.0

Course Description: Students will learn how to install, manage, monitor, configure, and troubleshoot DNS, DHCP, Remote Access, Network Access, and IP Routing in a Windows Server 2016 network infrastructure. Configure LAN routing, configure DFS, manage network printing, and Configure IPv4 and IPv6 connection settings.

Course Objective: This course prepares students for Microsoft 70-741 Exam.

Learning outcomes: Upon successful completion of this course, the student will be able to:

- Deploy, manage and maintain servers
- Configure File and Print Services
- Configure a Network Policy Server (NPS) infrastructure
- Configure and manage Active Directory
- Configure and manage Group Policy

Instructional Methods: Class Lecture, Lab and In-Class Discussions include a breakdown of each chapter in the following session that is being attended. In depth Lecture, Lab and In-Class Discussions on DNS, DHCP, RRAS, and NAP. Testing configuration machines on configuring LAN routing, secure files and folders using NTFS permissions and EFS. Configure a DHCP relay agent and create DNS zones and records and Manage DNS zone transfers.

Required Course Materials

Course Title: IE140- Planning, Implementing and Administering Microsoft Windows Directory Services

Prerequisites(s): IE122

Credits: 3.0

Course Description: Students will learn to operate in medium to very large computing environments that use the Windows Server 2016 operating system. It will help implement an AD DS in distributed environments that can include complex network services and multiple locations and domain controllers.

Course Objective: This course prepares students for Microsoft 70-742 Exam.

Learning outcomes: Upon successful completion of this course, the student will be able to:

- Install and configure Windows Server 2016
- Configure server roles and features
- Deploy and configure network core services
- Install and administer Active Director
- Create and manage Group Policy

Instructional Methods: Class Lecture, Lab and In-Class Discussions include a breakdown of each chapter in the following session that is being attended. Lecture, Lab and In-Class Discussions on specific topics on Installation, Groups & User management, Organizational units, Domain Controller, Permission, and Backups. Changing domain and forest functional levels. Creation of GPOs and configure GPO settings. Implementation of DNS structure including root hints or a root zone, zone delegation, and forwarding.

Required Course Materials

- Panek, W. (2018). MCSA Windows Server 2016 Study Guide: Exams 70-742. Sybex

Additional Course Material

- Zacker, C. (2018). Exam Ref 70-742 Installing and Configuring Windows Server 2016 (MCSA): Exam 70-742. Microsoft Press

Course Title: IE160-Planning and Maintaining a Microsoft Windows Network Infrastructure

Prerequisites(s): IE140

Credits: 3.0

Course Description: The student will learn to analyze the business requirements for a network infrastructure, design and implement a network infrastructure that meets business requirements using Windows Server 2016.

Course Objective: This course prepares students for Microsoft 70-740 Exam.

Learning outcomes: Upon successful completion of this course, the student will be able to:

- Configure and manage high availability
- Implement business continuity and disaster recovery
- Configure Network Services
- Configure the Active Directory infrastructure
- Configure Identity and Access solutions

Instructional Methods: Class Lecture, Lab and In-Class Discussions include a breakdown of each chapter in the following session that is being attended. Lecture, Lab and In-Class Discussions on specific topics on Clustering, Access Solutions, Business Continuity and Data Recovery.

Required Course Materials

- Panek, W. (2018). MCSA Windows Server 2016 Study Guide: Exams 70-740. Sybex

- Configure Identity and Access solutions

Instructional Methods: Class Lecture, Lab and In-Class Discussions include a breakdown of each chapter in the following session that is being attended. Lecture, Lab and In-Class Discussions on specific topics on Clustering, Access Solutions, Business Continuity and Data Recovery.

Required Course Materials

- Panek, W. (2018). MCSA Windows Server 2016 Study Guide: Exams 70-740. Sybex

Additional Course Material

- Mackin, J. (2018). Exam Ref 70-740 Configuring Advanced Windows Server 2016 Services. Microsoft Press

Course Title: IE170- Technical Career Preparation Workshop

Pre-Requisites: None

Credits: 2.0

Course Description: To enable students to obtain a job using effective resume, good interviewing skills and effective job search methods.

Learning outcomes: Upon successful completion of this course, the student will be able to:

- Create an effective resume.
- Learn effective methods for job searching.
- Learn how to get ready for a personal and technical interview.
- Technical interview preparation.

Instructional Methods: Class Lecture, Lab and In-Class Discussions include a breakdown of each chapter in the following session that is being attended. Lecture, Lab and In-Class Discussions on specific topics on Resume preparation, interviewing skills and preparation, cover letter preparation, job hunting strategies, following-upon an interview.

Required Course

Materials

- Getting a Good Job in Less Time (PC AGE)

Approximate Amount of Time

Task Requirement	Amount of time (Hours)
Distance Learning	26
Lecture, Lab and In-Class Discussion	4
Total Hours	30

Grading

Students have to:

- Attend the Lecture, Lab and In-Class Discussion on Resume Writing and Interview Preparation
- Students have to complete all the required online modules by the end of the course.

- Grading based as an average of the scores obtained in all completed modules. If a student has a failing grade for Distance Learning because of not being able to complete all the required modules by the end of the course, he/she will be given an extra week and awarded a grade of 70 when all the hours are completed, otherwise he/she will keep the same grade.

Course Outline-

	Topics	Time
1	Getting the Interview	3.0 hour(s)
2	Preparing Yourself	3.0 hour(s)
3	Making an Entrance	3.0 hour(s)
4	Listening and Answering	3.0 hour(s)
5	Taking the Reins	3.0 hour(s)
6	Asking Questions	3.0 hour(s)
7	Opening Interviews	2.0 hour(s)
8	Tough Interviews	3.0 hour(s)
9	Following Through	2.0 hour(s)
	Total	24.0 hours

Course Title: IE180- Implementing and Managing Security in a Microsoft Windows Network

Prerequisites(s): IE110/IE100

Credits: 3.0

Objective: Give students the knowledge and skills to design, implement, administer, and troubleshoot network security with such encryption like SSL, Kerberos, EFS and Bitlocker.

Course Objective: This course prepares students for CompTIA Security+ SY0-501 Exam.

Learning outcomes: Upon successful completion of this course, the student will be able to:

- Understand the concepts of authentication, encryption, access control and logging.
- Configure SSL connections and Configure Kerberos settings
- Plan, implement and test an enterprise security strategy
- Identify penetration testing such as White, Black, and Grey box testing.
- Identify and implement appropriate disaster recovery procedures

Instructional Methods: Class Lecture, Lab and In-Class Discussions include a breakdown of each chapter in the following session that is being attended. Lecture, Lab and In-Class Discussions on specific topics on Authentication, Encryption, Security Protocols, Network Security Devices, and Access Permissions. Secure remote access connections. Configure the Windows Firewall. Secure folder and file access using DACLs.

Required Course Materials

- Dulaney, E. (2018). CompTIA Security+ Study Guide: Exam SY0-501. Sybex

Additional Course Material

- Conklin, W., White, G., Williams, D, Davis, R., Cothren, C. (2018). CompTIA Security + All-in-One Exam Guide (Exam SY0-501), 5th Edition. McGraw-Hill

Approximate Amount of Time

Task Requirement	Amount of time (Hours)
Lecture, In-Class Lab and Discussion	46
Project	4
Total	50

Course Outline

Week	Session	Homework Reading Assignment	Amount of homework time (Hours)
Week 1	Session 1	Chapter 1: Managing Risk Chapter 2: Monitoring and Diagnosing Networks	2.5 hours
	Session 2	Chapter 3: Understanding Devices and Infrastructure	1 hours
Week 2	Session 1	Chapter 4: Identity and Access Management Chapter 5: Wireless Networks Threats	2.5 hours
	Session 2	Chapter 6: Securing the Cloud	1 hours

Week 3	Session 1	Chapter 7: Host, Data, and Application Security Chapter 8: Cryptography	2.5 hours
	Session 2	Chapter 9: Threats, Attacks ad Vulnerabilities	1 hours
Week 4	Session 1	Chapter 10: Social Engineering and Other Foes Chapter 11: Security Administration	2.5 hours
	Session 2	Chapter 12: Disaster Recovery and Incident Response Final Test Final Project	1 hours

Course Title: IE180T – Certification Test Preparation

Prerequisites(s): None

Credits: 1.0

Course Description: This course reinforces the student learning process by reviewing learned topics with the aid of online simulation tools and computer-based training. It provides additional simulated hands-on experience as the student prepares for the related certification and technical job interview.

Learning outcomes: Upon successful completion of this course, the student will be able to:

- Understand the concepts of authentication, encryption, access control and logging.
- Configure SSL connections and Configure Kerberos settings
- Plan, implement and test an enterprise security strategy
- Identify penetration testing such as White, Black, and Grey box testing.
- Identify and implement appropriate disaster recovery procedures

Instructional Methods: Class Lecture, Lab and In-Class Discussions include a breakdown of each chapter in the following session that is being attended. Lecture, Lab and In-Class Discussions on specific topics on Authentication, Encryption, Security Protocols, Network Security Devices, and Access Permissions. Secure remote access connections. Configure the Windows Firewall. Secure folder and file access using DACLs.

Required Course Materials

- Dulaney, E. (2018). CompTIA Security+ Study Guide: Exam SY0-501. Sybex

Additional Course Material

- Conklin, W., White, G., Williams, D, Davis, R., Cothren, C. (2018). CompTIA Security + All-in-One Exam Guide (Exam SY0-501), 5th Edition. McGraw-Hill

Course Title: IE190- Introduction to Cisco Router Configuration (CCENT)

Prerequisites(s): IE115

Credits: 3.0

Course Description: The course teaches the networking concepts and basic command required to configure Cisco routers and switches for small sized networks. You will gain skills in managing Cisco devices with multiple subnets.

Course Objective: This course prepares students for Cisco CCENT Exam 100-105.

Learning outcomes: Upon successful completion of this course, the student will be able to:

- IP Addressing, subnetting, CIDR and VLSM
- Backup, restore, upgrade Cisco IOS software image.
- Configure and troubleshoot static routes.
- Control router password, identification and messages and list and solve problems that each routing type encounters

Instructional Methods: Class Lecture, Lab and In-Class Discussions include a breakdown of each chapter in the following session that is being attended. Lecture, Lab and In-Class Discussions on specific topics like dividing an IP address across multiple networks, configuring and enabling router interfaces, working with the Spanning Tree Protocol, and beginner routers, switches, VTP, and STP.

Required Course Materials

- Lammle, T. (2016). CCNA Routing and Switching Study Guide, 2nd Edition
Sybex

Additional Course Material

- Odom, W. (2016). Cisco CCENT/CCNA ICND1 100-105. Cisco Press

Approximate Amount of Time

Task Requirement	Amount of time (Hours)
Lecture, In-Class Lab and Discussion	46
Project	4
Total	50

Course Outline

Week	Session	Homework Reading Assignment	Amount of homework time (Hours)
Week 1	Session 1	Chapter 1: Internetworking Chapter 2: Review of Ethernet Networking and Data Encapsulation Chapter 3: Introduction to TCP/IP	2.5 hours
	Session 2	Chapter 4: Easy Subnetting Chapter 5: VLSMs, Summarization, and Troubleshooting TCP/IP Chapter 6: Cisco IOS	2.5 hours
Week 2	Session 1	Chapter 6 – Cisco’s Internetworking Operating System (IOS)	2.5 hours
	Session 2	Chapter 7: Managing a Cisco Internetwork Mid-Term	2.5 hours

Week 3	Session 1	Chapter 8: IP Routing	2.5 hours
	Session 2	Chapter 9: OSPF	2.5 hours
Week 4	Session 1	Chapter 10: Layer 2 Switching and STP	2.5 hours
	Session 2	Chapter 11: VLANs Final Test Final Project	2.5 hours

Course Title: IE190T – Certification Test Preparation

Prerequisites(s): None

Credits: 1.0

Course Description: The course teaches the concepts and command required to configure, secure, manage and troubleshoot Cisco routers for small and medium sized networks. You will gain skills in managing Cisco devices on a private network, with multiple subnets, connected to the Internet.

Learning outcomes: Upon successful completion of this course, the student will be able to:

- IP Addressing, subnetting, CIDR and VLSM
- Backup, restore, upgrade Cisco IOS software image.
- Configure and troubleshoot static routes.
- Control router password, identification and messages and list and solve problems that each routing type encounters

Instructional Methods: Class Lecture, Lab and In-Class Discussions include a breakdown of each chapter in the following session that is being attended. Lecture, Lab and In-Class Discussions on specific topics like dividing an IP address across multiple networks, configuring and enabling router interfaces, working with the Spanning Tree Protocol, and beginner routers, switches, VTP, and STP.

Required Course Materials

- Lammle, T. (2016). CCNA Routing and Switching Study Guide, 2nd Edition
Sybex

Additional Course Material

- Odom, W. (2016). Cisco CCENT/CCNA ICND1 100-105. Cisco Press

Course Title: IE195- Advanced Cisco Router Configuration (CCNA)

Prerequisites(s): IE190

Credits: 3.0

Course Description: The course teaches the concepts and command required to configure, secure, manage and troubleshoot Cisco routers for small and medium sized networks. You will gain skills in managing Cisco devices on a private network, with multiple subnets, connected to the Internet.

Course Objective: This course prepares students for Cisco CCNA Exam 200-105.

Learning outcomes: Upon successful completion of this course, the student will be able to:

- Configure and troubleshoot routing protocols (RIP, OSPF, EIGRP)
- Configure, monitor and troubleshoot routing protocols.
- Install, configure and operate routed LAN and WAN while Improve network reliability and quality of service.
- Control and filter shared Internet access using NAT and ACLs.

Instructional Methods: Class Lecture, Lab and In-Class Discussions include a breakdown of each chapter in the following session that is being attended. Lecture, Lab and In-Class Discussions on specific topics such as enabling and disabling switch ports, routing protocol troubleshooting, routing tables, access control lists, VLAN Trunking Protocol (VTP), Frame Relay, and PPP.

Required Course Materials

- Lammle, T. (2016). CCNA Routing and Switching Study Guide, 1st Edition
Sybex

Additional Course Material

- Odom, W. (2016). Cisco CCNA Routing and Switching ICND2 200-105

Approximate Amount of Time

Task Requirement	Amount of time (Hours)
Lecture, In-Class Lab and Discussion	46
Project	4
Total	50

Course Outline

Week	Session	Homework Reading Assignment	Amount of homework time (Hours)
Week 1	Session 1	Chapter 12: Security Chapter 13: Network Address Translation (NAT)	2.5 hours
	Session 2	Chapter 14: IPv6	2.5 hours
Week 2	Session 1	Chapter 15: Enhanced Switched Technologies	2.5 hours
	Session 2	Chapter 16: Managing Cisco Devices Mid-Term	2.5 hours

Week 3	Session 1	Chapter 17: IP Services	2.5 hours
	Session 2	Chapter 18: Troubleshooting IP, IPv6, and VLANs	2.5 hours
Week 4	Session 1	Chapter 19: Enhanced IGRP Chapter 20: Multi-Area OSPF	2.5 hours
	Session 2	Chapter 21: Wide Area Networks Final Test Final Project	2.5 hours

Course Title: IE195T – Certification Test Preparation

Prerequisites(s): None

Credits: 1.0

Course Description: The course teaches the concepts and command required to configure, secure, manage and troubleshoot Cisco routers for small and medium sized networks. You will gain skills in managing Cisco devices on a private network, with multiple subnets, connected to the Internet.

Learning outcomes: Upon successful completion of this course, the student will be able to:

- Configure and troubleshoot routing protocols (RIP, OSPF, EIGRP)
- Configure, monitor and troubleshoot routing protocols.
- Install, configure and operate routed LAN and WAN while Improve network reliability and quality of service.
- Control and filter shared Internet access using NAT and ACLs.

Instructional Methods: Class Lecture, Lab and In-Class Discussions include a breakdown of each chapter in the following session that is being attended. Lecture, Lab and In-Class Discussions on specific topics such as enabling and disabling switch ports, routing protocol troubleshooting, routing tables, access control lists, VLAN Trunking Protocol (VTP), Frame Relay, and PPP.

Required Course Materials

- Lammle, T. (2016). CCNA Routing and Switching Study Guide, 1st Edition
Sybex

Additional Course Material

- Odom, W. (2016). Cisco CCNA Routing and Switching ICND2 200-105

Course Title: IE200 – Designing, Implementing and Troubleshooting Windows and Cisco Networks

Pre-Requisites: IE170

Credits: 1.0

Course Description: The course will enable a student to design, implement and troubleshoot local and wide area networks.

Learning outcomes: Upon successful completion of this course, the student will be able to:

- Design and implement a TCP/IP network for a medium sized company.
- Install and configure all the components of network including application servers.
- Install and configure Cisco routers for public network access.
- Implement Remote Access to access company network through internet.
- Deploy a network environment
- Configure network access and filtering.

Instructional Methods: Class project that includes coverage of all topics learned in prior courses. Lecture, Lab and In-Class Discussions on specific topics on TCP/IP, LAN, WAN, Routing, Firewall, Proxy, VPN, Domain Controller, DNS, DHCP, Maintaining an Upgrade Infrastructure.

Approximate Amount of Time

Task Requirement	Amount of time (Hours)
In Class Project	21
Total Hours	21

Grading

Students will earn credit for the course after successful completion of the project.

Course Title: IE210- Certification Test Preparation

Pre-Requisites: IE122

Credits: 3.0

Course Objectives: The course will enable a student to take the certification tests for Microsoft Azure.

Learning outcomes: Upon successful completion of this course, the student will be able to:

- How to provision virtual machines
- How to leverage PaaS to develop applications
- How to develop serverless cloud applications
- How to process high-performance computing jobs

Instructional Methods: Self- paced and online modules.

Approximate amount of time

Task Requirement	Amount of time (Hours)
Distance Learning	45
Total Hours	45

Grading

Students have to complete all the required online modules by the end of the course. Grading based as a percentage of the hours that student completed by the end of the course and the number of hours, he/she was required to. For a module's hours to be awarded to the student, a score of 100 must be obtained on the "Done" and "Mastered" columns. If a student has a failing grade for Distance Learning because of not being able to complete all the required hours by the end of the course, he/she will be given an extra week and awarded a grade of 70 when all the hours are completed, otherwise he/she will keep the same grade.

Distance Learning

	Topics	Time (Approx Hrs)
1	Managing Microsoft Azure Identity and Security	21.0 hour(s)
2	Managing Microsoft Azure Storage	12.0 hour(s)
3	Microsoft Azure Deployment	6.5 hour(s)
4	Managing Microsoft Azure Networking	5.5 hour(s)
	Total	45.0 hours

Course Title: IE 230 - Implementing Advanced Network Security

Pre-Requisites: IE180

Credits: 2.0

Course Description: Provides students with skills on risk management, research and identification of threats and applicable countermeasures and learn how to collaborate securely.

Course Objective: This course prepares students for the CompTIA Cybersecurity Analyst (CySA+) exam CSA-001.

Learning outcomes: Upon successful completion of this course, the student will be able to:

- Analyze network security concepts, components, and architectures, and implement controls
- Use research and analysis to secure the enterprise
- Implement security controls
- Conduct vulnerability assessments
- Conduct incident and emergency responses.

Instructional Methods: Class Lecture, Lab and In-Class Discussions include a breakdown of each chapter in the following session that is being attended. Lecture, Lab and In-Class Discussions on specific topics on Host, network, application, and storage integration, Enterprise-level infrastructure security, Secure cloud computing, Enterprise security research and analysis, Advanced authentication tools and techniques, Security policies and procedures, and Best security practices for changing business models.

Required Course Materials

- Chapple, Mike and Seidl, David. (2017). CompTIA CySA+ Study Guide: Exam CS0-001. 1st Edition. Sybex.

Additional Course Material

- Maymi, Fernando and Chapman, Brent (2010). CompTIA CySA+ Cybersecurity Analyst Certification All-in-One Exam Guide (Exam CS0-001). 1st Edition. McGraw-Hill.

Approximate Amount of Time

Task Requirement	Amount of time (Hours)
Lecture, In-Class Lab and Discussion	46
Project	4
Total	50

Course Outline

Week	Session	Homework Reading Assignment	Amount of homework time (Hours)
Week 1	Session 1	Chapter 1: Cryptographic Concepts and Techniques Chapter 2: Enterprise Storage	2.5 hours
	Session 2	Chapter 3: Network and Security Components, Concepts and Architectures Chapter 4: Security Controls for Hosts	2.5 hours
Week 2	Session 1	Chapter 5: Application Vulnerabilities and Security Controls Chapter 6: Business Influences and Associated Security Risks	2.5 hours
	Session 2	Chapter 7: Risk Mitigation Planning, Strategies and Controls Chapter 8: Security, Privacy Policies, and Procedures Chapter 9: Incident Response and Recovery Procedures Mid-Term Test	2.5 hours

Week 3	Session 1	Chapter 10: Industry Trends Chapter 11: Securing the Enterprise	2.5 hours
	Session 2	Chapter 12: Assessment Tools and Methods Chapter 13: Business Unit Collaboration	2.5 hours
Week 4	Session 1	Chapter 14: Secure Communication and Collaboration Chapter 15: Security Across the Technology Life Cycle	2.5 hours
	Session 2	Chapter 16: Host, Storage, Network, and Application Integration into a Secure Chapter 17: Enterprise Architecture Final Test Final Project	2.5 hours

Course Title: IE230T – Certification Test Preparation

Prerequisites(s): None

Credits: 1.0

Course Description: Provides students with skills on risk management, research and identification of threats and applicable countermeasures and learn how to collaborate securely.

Learning outcomes: Upon successful completion of this course, the student will be able to:

- Analyze network security concepts, components, and architectures, and implement controls
- Use research and analysis to secure the enterprise
- Implement security controls
- Conduct vulnerability assessments
- Conduct incident and emergency responses.

Instructional Methods: Class Lecture, Lab and In-Class Discussions include a breakdown of each chapter in the following session that is being attended. Lecture, Lab and In-Class Discussions on specific topics on Host, network, application, and storage integration, Enterprise-level infrastructure security, Secure cloud computing, Enterprise security research and analysis, Advanced authentication tools and techniques, Security policies and procedures, and Best security practices for changing business models.

Required Course Materials

- Chapple, Mike and Seidl, David. (2017). CompTIA CySA+ Study Guide: Exam CS0-001. 1st Edition. Sybex.

Course Title: UN 100 – Linux System Administration I

Pre-Requisites: IE100

Credits: 3.0

Course Description: The course will introduce the students to Linux operating system. Installing, maintaining and troubleshooting packages, patches, users, groups, file system and permission.

Course Objective: This course prepares students for CompTIA XK0-104 Exams.

Learning outcomes: Upon successful completion of this course, the student will be able to:

- Install the Linux Environment on a Standalone System.
- Install, remove and check status or information about packages and patches.
- Create, Delete, and modify users and groups properties. Work with files and directory structure.
- Configure Linux for Network use.
- Use Terminal Commands and Use commands to manipulate device aliases.

Instructional Methods: Class Lecture, Lab and In-Class Discussions include a breakdown of each chapter in the following session that is being attended. Lecture, Lab and In-Class Discussions on specific topics on View command help, Manage files and directories. Create hard and symbolic links, Configure the boot file, manage system and service run, levels, Stop, restart, and manage services. Shut down the system, Manage users and groups. Manage passwords, format a hard disk, mount a volume, manage quotas, and Manage file and directory permissions. Manage printing, and Manage network interfaces

Required Course Materials

- Bresnahan, Christine and Blum, Richard (2019). CompTIA Linux+ Study Guide: Exam XK0-104. Sybex.

Additional Course Material

- Jordan, Ted (2019). CompTIA Linux+ Certification All-in-One Exam Guide (Exams XK0-103 and LX0-104). McGraw-Hill.

Approximate Amount of Time

Task Requirement	Amount of time (Hours)
Lecture, In-Class Lab and Discussion	46
Project	4
Total	50

Course Outline

Week	Session	Homework Reading Assignment	Amount of homework time (Hours)
Week 1	Session 1	Chapter 1: An Introduction to Linux Chapter 5: Installing Linux	2.5 hours
	Session 2	Chapter 2: Working with the Linux Shell	2.5 hours
Week 2	Session 1	Chapter 3: Using the vi Text Editor	2.5 hours
	Session 2	Chapter 4: Managing Linux Files and Directories Mid-Term Exam	2.5 hours

Week 3	Session 1	Chapter 6: Managing the Linux Boot Process	2.5 hours
	Session 2	Chapter 7: Managing the Graphical Environment	2.5 hours
Week 4	Session 1	Chapter 9: Managing Linux Users and Groups	2.5 hours
	Session 2	Chapter 8: Managing Linux Software Final Test Final Project	2.5 hours

Course Title: UN100T – Certification Test Preparation

Prerequisites(s): None

Credits: 1.0

Course Description: This course reinforces the student learning process by reviewing learned topics with the aid of online simulation tools and computer-based training. It provides additional simulated hands-on experience as the student prepares for the related certification and technical job interview.

Learning outcomes: Upon successful completion of this course, the student will be able to:

- Install the Linux Environment on a Standalone System.
- Install, remove and check status or information about packages and patches.
- Create, Delete, and modify users and groups properties. Work with files and directory structure.
- Configure Linux for Network use.
- Use Terminal Commands and Use commands to manipulate device aliases.

Instructional Methods: Class Lecture, Lab and In-Class Discussions include a breakdown of each chapter in the following session that is being attended.
